DEMONSTRATION ONLY - FICTIONAL DATA - NO REAL TRANSACTION

A few steps to get started.

1. Check your account details

Review your name and contact email in My account. Contact your portfolio team if anything needs correction. Keep your login credentials private.

2. Review documents from your team

Open the onboarding documents on your dashboard and read them carefully. Record your review when ready. Your acknowledgement confirms that you have read that version; it is not an electronic signature.

3. Supply requested documents

Use Documents to upload onboarding files requested by your team. Follow their instructions about which records are needed. Uploads remain private to staff and show a review status; review feedback explains any corrections needed.

4. Wait for your team to confirm next steps

Your team will confirm any required checks and when you can proceed. A document acknowledgement alone does not confirm payment, compliance approval or ownership.

5. Return whenever you need

Your approved records stay in the document vault. Use Service requests for available holding services and check your dashboard for updates.

Fictional demonstration guide - final onboarding requirements need confirmation.
